ForgeClaw

The Verified Agent Composer for the MCP Ecosystem

Seed Round | AdaBoost AI | March 2026

forgeclaw.io

The Problem

The AI Agent Ecosystem Is Broken

1,184

Malicious Skills

ClawHavoc poisoned 20% of ClawHub registry with credential stealers and reverse shells

300K+

Exposed Users

OpenClaw users with no security scanning, no governance, no verified composition

0

Verified Composers

No platform scans skills before composing them into agent workflows

The Solution

Intent → Verify → Compose → Deploy

Describe

Natural language intent

→

AI Designs

Claude architects skills

→

Verify

85 SAFE-MCP threat scans

→

Deploy

Docker / K8s / Zeebe / MCP

Product

Three Tabs. One Platform.

Scanner

Paste any SKILL.md → instant security report. 25 embedded patterns + VerifyClaw's 86-test deep scan pipeline.

Intelligence

Agent Library shows all composed agents. Live VerifyClaw feed tracks ClawHavoc campaigns and threat categories.

Forge

Type intent → Claude designs skills → editable BPMN workflow → context-aware properties panel → Deploy to 5 targets.

5 Deploy Targets

One design. Any infrastructure.

Python + Docker

agent.py, Dockerfile, .env, docker-compose.yaml

Claude Desktop

claude_desktop_config.json with MCP server definitions

Zeebe Workers

Individual job workers per BPMN task, orchestrated execution

OpenClaw Skill

SKILL.md + package.json ready for ClawHub publishing

Kubernetes

Full manifests with HPA autoscaling, secrets, probes

Visual Agent Design

BPMN modeler with context-aware properties panel

Service Task

Database, API endpoint, auth headers

Receive Task

Wait-for event, correlation key, timeout

Script Task

Language, code editor, timeout

Gateway

Condition expressions per outgoing path

User Task

Assignee, form fields, due date, priority

Timer Event

Cron, duration, fixed date

Send Task

Slack, email, webhook, SMS, Telegram, Discord

Business Rule

Decision table (if→then rules)

Market

$52.6B

AI Agents Market by 2030

46.3% CAGR from $7.84B in 2025

300K+

OpenClaw Active Users

180K+ GitHub stars, fastest-growing agent framework

13,700+

ClawHub Skills

Growing daily — needs security and composition layer

$180M

Dify Valuation (March 2026)

Closest comparable — visual agent workflow builder

Security Moat

VerifyClaw: the only security scanner for MCP skills

ClawHavoc: 1,184 malicious skills. 20% of registry. ForgeClaw is the only platform that blocks compromised skills before composition.

Competitive Landscape

	ForgeClaw	Dify	n8n	Camunda
AI agent design from intent	✅	❌	⚠️	❌
Security scanning (SAFE-MCP)	✅	❌	❌	❌
Visual BPMN editor	✅	✅	✅	✅
Multi-target deploy (5)	✅	❌	❌	⚠️
Zeebe orchestration	✅	❌	❌	✅
OpenClaw/MCP native	✅	⚠️	⚠️	⚠️
Context-aware properties	✅	⚠️	✅	✅
Threat intelligence feed	✅	❌	❌	❌

Technology Stack

Frontend	Next.js 14, React, bpmn-js (Camunda), D3.js
AI Engine	Claude Sonnet 4, structured JSON output, agent design + code generation
Security	VerifyClaw 86-test pipeline, SAFE-MCP framework, 25 embedded patterns
Orchestration	Zeebe (Camunda), job workers per BPMN task, gRPC protocol
Data	Supabase Postgres (prod), in-memory graph (dev), Neo4j (VerifyClaw)
Deploy	Docker, Kubernetes + HPA, Vercel, Blaxel, Cloudflare Tunnels
Infra	Lambda Quad (4x RTX 3070), Docker Compose, Cloudflare DNS

Business Model

Free

$0

25-pattern scan, 3 agents/month, embedded scanner, community support

Pro

$49/mo

Unlimited agents, full 86-test VerifyClaw scan, Zeebe orchestration, Slack/email alerts, 5 deploy targets

Enterprise

$499/mo

Custom ontology, private ClawHub, human-in-the-loop governance, SLA, dedicated support, K8s deployment

API / x402

$0.05/query

Micropayment per scan via Circle USDC, autonomous AI agent access, pay-per-use model

Traction & Milestones

✅ ForgeClaw v2 live on Vercel + Docker	forgeclaw-app.vercel.app
✅ VerifyClaw deployed on Blaxel + Cloudflare	verifyclaw.io — 25-test security scanner
✅ MEV agent live on Ethereum mainnet	Scanning mempool, Slack alerts, Docker deployed
✅ Claude AI agent composition working	Full intent → design → BPMN → deploy pipeline
✅ Zeebe worker generation	Individual job workers per BPMN task
✅ 5 deploy targets	Python, Zeebe, K8s, Claude Desktop, OpenClaw
✅ Supabase + Vercel production stack	Dual mode: Docker local + Vercel production
🔜 First 10 paying customers	Target: DeFi teams, OpenClaw power users

The Ask

Raising $1.5M Seed

at $8M pre-money valuation

40%	Engineering	Hire 2 engineers: Zeebe runtime + OpenClaw integrations
25%	Go-to-Market	OpenClaw community, HN launch, SBC conference, content
20%	Infrastructure	Cloud hosting, Zeebe clusters, API costs
15%	Operations	Legal, compliance, 12-month runway buffer

Suvasis Mukherjee

Founder & CEO, AdaBoost AI

→ 20+ years Software Engineering Experience

→ MSCS Santa Clara University, AI/Data Mining Graduate Certificate Stanford

→ Enterprise software: Oracle SoA, TIBCO Data grid products

→ GPU/CUDA financial systems on 4x RTX 3070

→ Hands on experience with Oracle SOA's large scale, complex codebase used by thousands of customers.
